

## Llama 2

Llama 2 is a AI Model that can be used in multiple mobile apps which can revolutionise the AI world significantly as one way you can get the best use out of this AI model is implementing them into mobile apps and have them acting as personal virtual assistants for the user. This can help in apps such as a medical app or a banking app as the user can be allowed to give the AI their personal information and from there it can assist the user with any inquires and doubts, they might have. Llama 2 can be also can be used in apps that have a language barrier as a app might be in a different language or in general into translation apps, Llama 2 can make these apps more aware and accurate and allow to be used in real time which can significantly help people travelling countries and help people learn new languages they wish to learn as Llama 2 can remove the language barrier and promote cross cultural communication. Llama 2 can also be integrated into editing apps as well such aa photoshop etc. By implementing such users would be able to generate a photo or assistance with editing just by asking the AI what their desire is as users can use this to create creative posters, Instagram posts, or even make narratives based on their specified input. Gaming can be affected by Llama 2 massively as well as implementing this into mobile gaming apps players can have a mode where they can create their own desired world. Llama 2 can also be used in educational apps or help the user learn new things in general as if a user needs assistance on homework or a project, Llama 2 will be able to give back instant feedback and help with anything the user has a question on or is stuck on. As Llama 2 can be treated as a personal tutor almost as it can adapt to your learning style and help progress your studies better. Apps such as Khan Academy and others can adapt Llama 2 to help their users further to reach their desired goals and to be never confused about any question or a mistake they have made and give instant feedback after the question being inputted. By using the power Llama 2 upholds mobile app developers can use this as a personal assistant in most of their apps to handle and sort of problem the user may be in as it can also enhance their app significantly.
